Employee Management

EmployeeM is a web-based application designed to help organizations manage employee information effectively. Built using ASP.NET MVC and ADO.NET, it securely handles employee and department data, ensuring smooth organization and retrieval. The system includes features like authentication and role-based access control through ASP.NET Identity, allowing only authorized users to access specific data. It supports linking employees to their respective departments and provides an efficient way to manage these relationships. By leveraging ADO.NET, the application ensures efficient database operations, security, and scalability to meet your organization's needs.

"EmployeeM, smarter employee management"
